

Assignment 2: User stories

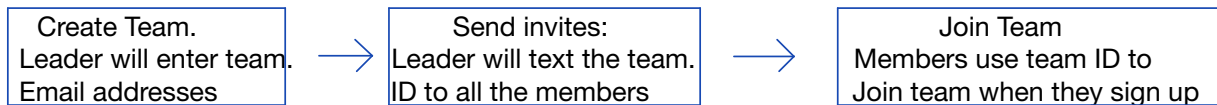

Team 11: Ghada Abahussain, Tom Corcoran, Jesse Fimbres, Anthony Pasquariello

1. User's can log in and save their schedule to their profile

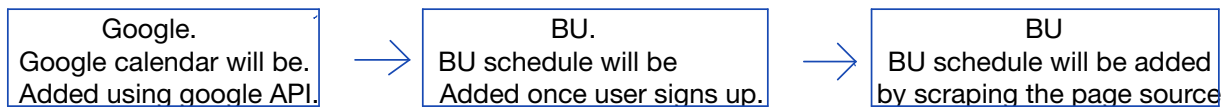

User story 1 shows the account creation process and flow. The user will create an account and import their BU schedule then they will sign in with google credentials using Oauth and upload their google calendar. The BU schedule will be scraped after the user provides the page source of their schedule. These two calendars will be combined and saved as the user's final calendar that will be used when scheduling meetings.

2. Group leader can text the team ID to all the members joining the team

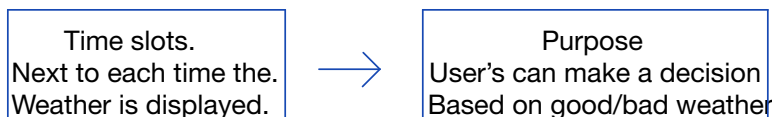

User story 2 shows the team creation process. The team leader create a team by typing in the email address of all the members that will be in the team and then send out the team ID to all the team members so they can use it when they sign up and join the team.

3. User's can easily input their schedule from Studentlink and Google calendar

4. Once all the users submit their schedule the app finds a list of available times based on the users schedules, then each user can vote on a time and finally the weather is displayed next to each time slot

User story 4 when team members are voting on available times, they will see a date and time, along with the weather forecast this will be done by querying a weather API for that specific time frame. In addition, each member's vote will be displayed along with the total number of votes per time slot.
